Touch System

Touch Computerized Electronic Measuring

Touch is the new computerized electronic measurement system from **THE COLLISION EQUIPMENT GROUP** that sets up fast, measures in minutes and lets you monitor pulls as you repair the vehicle. The **Touch** system comes complete with a Dell laptop computer and printer and makes it easy to document repairs. **TOUCH** is priced significantly below other systems and is affordable for any size shop. **TOUCH** delivers the precision you need and has multiple capabilities to add even more value. The **TOUCH** system is completely portable so you can use it for diagnostics in one area of the shop then move it to another area for actual repairs. **TOUCH** has full upper body capability and even allows for the measurement of parts, like struts, while off the vehicle. **TOUCH** is not affected by moving air or any type of shop noise. Our portability makes the **TOUCH** system fast and easy to demonstrate so we won't use up a lot of your valuable shop time. Finally, a computerized electronic measuring system every shop can afford.

[[Request Additional Information](#)]

Touch has over 4000 vehicles in its database to give you complete measuring capabilities.

Touch versatility allows you to measure & document hundreds of under and upper body points and shows you which way to pull.
